Water For Health:

Water is one of the earth's most precious and threatened resources. Health is one of each person's most precious resources. We need to enhance and protect them both.

Al Ain World Water Day - organized by AIPCE PR Consultancy. 22nd March 2008 - Al Wadi Park - 9 am : Please join us for a noble cause. email: worldwaterday@citydiscovery.net

3.4 million people, mostly children, die annually from water-related diseases. Most of these illnesses and deaths can be prevented through simple, inexpensive measures.

For instance, trachoma remains the leading cause of preventable blindness, accounting for 146 million acute cases around the world. But the disease is almost unheard of in places where basic water supply, sanitation and hygiene prevail.

Water For Health - Health Tourism and Medical Travel Platform, Water and Health, highlights the opportunities for promoting health and development through safe water.

AIPCE, the Organizer and its Global Alliance Partners share the goals of creating patient-centered care, of making health care accessible to all, and of creating and nurturing a community of professionals and patients.
